

SolarInvert Energy Solutions

Portable electric iron power supply production

Overview

What is iron power?

This document introduces the renewable energy carrier concept “iron power” as a cost-efficient alternative energy carrier system. The concept is based on the circular combustion and regeneration of iron powder. Iron powder will become part of the future mix of new energy carriers that is needed to replace fossil fuels.

What is the Iron power ecosystem?

The core of the iron power ecosystem is the use of iron powder as a medium to store and release renewable energy via combustion and regeneration. Iron powder can then be transported between energy supply and energy demanding locations. The full ecosystem is represented in Figure 3 and is explained below.

How to introduce iron power in the energy system?

To introduce iron power in the energy system, a new value chain needs to be set up. To achieve this, collaboration between governments, knowledge institutions, business partners from the industry, and trading companies is essential. To guide coordinated technology development and implementation efforts, we plan a roadmap as explained below. 6.1.

Who is developing iron power technology?

This document is the result of a joint effort by Eindhoven University of Technology, Metalot, Pometon S.p.A., EM Group, RISE ETC, Shell, SOLID, RIFT, Veolia and HeatPower. The consortia partners are developing the iron power technology.

How can iron power be safely applied in industry?

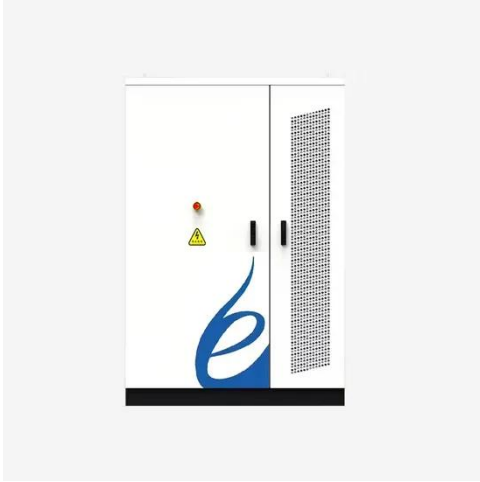

Combustion: Demonstration that iron power can be safely applied in industry.
Optimization and development of a 200 kW test-setup in a controlled

environment and subsequent demonstration of ~1 MW setups at end users. Directives for iron powder combustion to mitigate undesired emissions, such as volatile sub-species, and material losses. Cyclicality:.

Does iron power play a role in peak and back-up plants?

Therefore, iron power can also play an important role in peak and back-up plants. 6. Roadmap To introduce iron power in the energy system, a new value chain needs to be set up. To achieve this, collaboration between governments, knowledge institutions, business partners from the industry, and trading companies is essential.

Portable electric iron power supply production

CN204818347U

Therefore, be necessary to provide a kind of novel electric soldering iron, to overcome the defective that can't be used when there is no power supply, or away from power supply.
