# Price of lithium battery for energy storage in Western Europe

## Overview

---

Recent industry analysis reveals that lithium-ion battery storage systems now average €300-400 per kilowatt-hour installed, with projections indicating a further 40% cost reduction by 2030. How much does a lithium-ion battery storage system cost?

Recent industry analysis reveals that lithium-ion battery storage systems now average €300-400 per kilowatt-hour installed, with projections indicating a further 40% cost reduction by 2030. For utility operators and project developers, these economics reshape the fundamental calculations of grid stabilization and peak demand management.

How much does a lithium ion battery cost?

In the European market, lithium-ion batteries currently range from €200 to €300 per kilowatt-hour (kWh), with prices continuing to decrease as manufacturing scales up and technology improves. Power conversion systems, including inverters and transformers, represent approximately 15-20% of the total investment.

What are the key market trends for battery storage?

It covers key market trends, with a particular focus on the shift toward utility-scale storage, the continuing growth of residential and commercial installations, and the evolving role of battery storage in supporting Europe's clean energy goals.

What percentage of accumulators are lithium-ion batteries?

Some 70% of accumulators were lithium-ion batteries. Global battery exports were estimated at €260 billion in 2021 to 2023. EU exports to non-EU countries reached almost €18 billion – 9% of the global market – in the same period. The European Union meets half its battery demand with imports.
