Price of single-sided photovoltaic panels

Overview

Today's premium monocrystalline solar panels typically cost between 30 and 50 cents per Watt, putting the price of a single 400-watt solar panel between \$120 to \$200, depending on how you buy it. Less efficient polycrystalline panels are typically cheaper at \$0.25 per Watt. Why are polycrystalline solar panels so expensive?

It adds to the cost of these panels making them expensive. Polycrystalline panels use low-purity silicon. Its manufacturing process is also simple, keeping the solar PV module price affordable. No costly raw materials are used to produce thin film panels. They offer a lower panel solar price than monocrystalline and polycrystalline panels.

Do photovoltaic panels cost a lot?

Photovoltaic panels price may vary according to their durability and efficiency. You must see that the panels you choose are ideal for your region, its weather, and the sunlight your area receives. It helps better energy savings, enhanced life of the systems and a better ROI.

Where did photovoltaic cost data come from?

Photovoltaic cost data between 1975 and 2003 has been taken from Nemet (2009), between 2004 and 2009 from Farmer & Lafond (2016), and since 2010 from IRENA. Prices from Nemet (2009) and Farmer & Lafond (2016) have been converted to 2024 US\$ using the US GDP deflator, to account for the effects of inflation.
