# Purchase of flat-plate solar panels for self-built houses in Andorra

## Overview

---

If you're considering buying a house with solar panels, you'll want to ask if they are leased or owned. Owning the solar panels on your house is the best financial decision, according to Consumer Report.

Are solar flat plate collectors a good idea?

Using solar flat plate collectors, you can take advantage of the sun's abundant energy to lower your own energy costs. This means lower bills every month, free hot water for your home, and more energy independence. Solar flat plate collectors are an affordable solution to rising energy costs.

Is buying a home with solar panels the right move?

Currently, solar power accounts for just 3.9 percent of total U.S. electricity generation, but that number is rapidly growing. So is buying a home with solar panels the right move for you?

Well, that depends on some key factors.

Should I install a solar flat plate system?

Installing a solar flat plate system would mean significantly reducing - or eliminating - these costs. Furthermore, our solar hot water systems qualify for the Federal 30% tax credit, meaning that 30% of the installed cost of your solar hot water system is returned to you the next time you file your taxes.

How much energy does a solar flat plate water heating system use?

Installing a solar flat plate water heating system for your home can reduce your energy consumption by as much as 40% to 50%. It only takes 1 or 2 solar flat plates to heat over 80 gallons of hot water per day - all for free. Many people don't realize how much energy is used just to provide hot water in your home.

Why should you buy a solar-powered home?

How exciting! Owning a solar-powered home can help you save on your

energy bills, reduce greenhouse gas emissions, and be more energy independent. And thanks in part to investments from the Solar Energy Technologies Office, the cost of solar energy is coming down every year.

Can you buy a home with solar panels?

If the seller of your soon-to-be home outright owns the solar panels, that's ideal; the panels will likely only affect the home's price. If you buy a home with leased solar panels, though, you'll want to discuss any lease terms and monthly fees associated with the system. 6. What's the difference between solar loans and financing?
