

## SolarInvert Energy Solutions

# Rooftop photovoltaic panel factory

## Overview

---

What are rooftop solar photovoltaics?

Rooftop Solar Photovoltaics is a strategy for distributed generation of electricity using solar panels installed on rooftops. Sun is the ultimate source of energy, and rooftop solar power plants harvest this inexhaustible energy by deploying solar modules on the rooftop.

Can solar panels be installed on a factory roof?

The roofs of factories are often the ideal place to install solar panels. As factories are energy-intensive buildings, installing a solar PV system on the roof of a factory ensures free power can be generated to run everything underneath it.

Can solar PV be installed on warehouse roofs?

Installing solar PV on warehouse roofs means generating free electricity for the warehouse and adjacent buildings, such as offices. Warehouse and logistics firms can significantly reduce their energy bills with a solar PV system.

How can a flat roof power a factory?

Leverage the flat roofs of factories to generate additional power for electricity-intensive machinery or HVAC systems. SolarEdge's energy ecosystem is designed to maximize energy cost savings, seamlessly integrating PV, EV charging and storage solutions, promoting safety in combustible environments, and minimizing carbon emissions.
