Russia exports energy storage batteries

Overview

Will Russia's EV battery market be affected by sanctions?

June 2, 2022: Russia said on May 14 it was introducing controls on lead exports amid fears sanctions could disrupt the country's heavy reliance on battery imports — but analysts warn the global energy storage and EV batteries market is set to suffer too.

Is Russia a big importer of batteries?

Russia is also a “far bigger importer of finished batteries than it is an exporter”, typically 160ktpa in versus 20ktpa out”. CRU's lead analyst, Neil Hawkes, confirmed that all Russia's lead output comes from recycling, with no primary smelters.

How much lithium does Russia use?

Russia sits on an estimated one million tons of lithium, an amount comparable to the US. Lithium is used to make lithium-ion batteries, and has been in increasing demand since the EV boom. With oil and gas sanctions weighing on Russia's economy after its full-scale invasion of Ukraine, mining lithium is becoming more attractive.

Does Russia have a lithium reserve?

Russia's plan to develop one of its vast untapped lithium reserves is hitting major roadblocks. Russia sits on an estimated one million tons of lithium, an amount comparable to the US. Lithium is used to make lithium-ion batteries, and has been in increasing demand since the EV boom.

How will Russia and Ukraine affect electric vehicle batteries?

“Russia and Ukraine hold significant reserves of metals such as cobalt, nickel, platinum and palladium. Although for the prior commodities — save for palladium, at 40% world mined supply — neither are the world's foremost suppliers, prices will be impacted and could impact electric vehicle batteries.”.

Could polar lithium Spook China's involvement in Russia's energy sector?

On January 10, the outgoing administration of former President Joe Biden imposed a slew of sanctions on Russia's energy sector. On its list was Polar Lithium, an inclusion that could spook China's involvement.
