

**SolarInvert Energy Solutions**

# **South African Energy Storage Project Procurement**

## Overview

---

In an effort to increase penetration of renewable energy and reduce regular blackouts, the government and transmission system operator (TSO) Eskom have sought to procure large-scale battery energy storage system (BESS) capacity from private companies. Who is building a battery energy storage system in South Africa?

Scatec started construction on one of its winning projects in December while EDF is also building projects for RMIPPPP. A consortium including CIP and EDF has won preferred bidder status for three battery energy storage system (BESS) projects in South Africa.

How much does a battery storage project cost in South Africa?

The commitment to battery storage solutions is becoming increasingly significant as South Africa faces ongoing energy challenges and seeks to augment the integration of renewable power sources. The estimated cost of the Mogobe BESS project stands at ZAR 3bn (US\$170m), with the primary funding — about 90% — sourced from non-recourse project debt.

Why should we invest in battery energy storage in South Africa?

We applaud the South African government's commitment and dedication to the renewable energy procurement programmes. Battery energy storage will continue to play an important role in the energy transition, and we will continue to be at the forefront across our core markets," says Scatec CEO Terje Pilskog.

Why did South Africa approve 616mw in new battery storage projects?

South Africa has approved 616MW in new battery storage projects as part of its energy storage scheme, a \$530 million investment boosting national grid capacity and championing local industry wins. From ESS News.

How many Bess projects are there in South Africa?

The consortium was awarded the three BESS projects totalling 257MW/1,028MWh of energy storage by South Africa's Department of Mineral Resources and Energy (DMRE), out of a total of five awarded.

How will Bess projects impact South Africa's Energy Security?

As South Africa continues to grapple with frequent blackouts and load shedding, these BESS projects will help mitigate risks and contribute to the country's energy security. The Gainfar Project will be connected to the Ngwedi substation, while the Boitekong Project will be connected to the Marang substation.
