

SolarInvert Energy Solutions

Spanish energy storage vehicle prices

Overview

Does Spain have a storage market?

Currently, Spain's storage market is mainly composed of small-scale batteries co-located with solar PV. Spain's household electricity prices now stand at over EUR 0.30/kWh on average. In addition, Spain's reliance on fossil gas has increased price volatility in recent years.^{16,17,18,19}.

Does Spain need more battery storage?

This means that Spanish storage faces limited competition from cross-border flexibility. The Spanish Government have recognised the need for storage and set a target of 22GW by 2030. We expect this to be predominantly battery storage.

How does Spain's pumped hydro energy storage compete with Bess?

Spain's pumped hydro energy storage competes directly against BESS, limiting the battery storage opportunity in wholesale markets. 3. Missing ancillary markets Unlike Great Britain or Texas, Spain never created ancillary service markets that net-zero systems need:.

How will negative energy prices affect Spain?

Two structural factors limit how negative Spanish prices can go: Limited interconnection: Spain's 3 GW link with France is isolating it from the negative price contagion in Central Europe. When German prices reach -€150/MWh, Spain can't import enough energy to bring the price down.

Why is Spain a good place to buy electric cars?

Spain's notable positioning in this market is undoubtedly due to the winks received from the administration. The Government hopes that it will become a benchmark country both in the production of batteries for electric vehicles and in new forms of green and sustainable mobility.

Why are Spanish wholesale markets opening up a battery market?

Spanish wholesale markets have offered increasing revenues due to recent price volatility which rewards BESS through power trading. However, sustained investment in batteries will be supported by fully opening up markets.
