

SolarInvert Energy Solutions

Third-party solar photovoltaic modules

Overview

What are the different types of third-party ownership models in solar energy?

There are several different types of third-party ownership models in solar energy, including power purchase agreements (PPAs) and solar leases. In a PPA, the consumer agrees to purchase the electricity generated by the solar panels at a fixed rate for a set period of time, typically 10-20 years.

What is third-party solar financing?

Third-party financing is a well-established financing solution in the United States, having emerged in the solar industry as one of the most popular methods of solar financing. Third-party solar financing predominantly occurs in two forms: solar leases and power purchase agreements (PPAs).

Which states authorize third-party PPAs for solar PV?

This map of the United States shows which states and territories authorize the third-party PPAs for solar PV, which includes at least 28 states (plus Washington, D.C., and Puerto Rico). This map and information are provided as a public service and do not constitute legal advice.

Can third-party ownership make a solar install more affordable?

With the days of zero-interest loans a thing of the past (for now), homeowners and solar companies have sought out ways to make a solar install more affordable. Enter third-party ownership (TPO). According to reports, TPO volumes increased by 32% in 2023. This trend continued through Q3 of 2024 with TPO market share growing to 43% nationally.

How do I differentiate my PV modules & panels in a competitive market?

Differentiate your Photovoltaic (PV) Modules and Panels in a competitive market by substantiating your value proposition and marketing claims with independent, third-party performance testing and certification from Intertek. Intertek is your comprehensive source for all PV module testing and

certification needs.

What is the difference between a PPA and a TPO Solar System?

Under the PPA arrangement the system is installed at no cost to the homeowner, while the PPA locks in an electricity rate (typically lower than the utility) with the third-party to ensure a predictable rate structure. By comparison, leasing a solar system under a TPO arrangement offers a similar experience to leasing a car.
