

SolarInvert Energy Solutions

Tunisian power generation equipment container

Overview

While projects are often subject to delays, excellent commercial opportunities exist for the sale of power generation equipment to STEG-operated and IPP.

Tunisia's power sector is well developed, and nearly the entire population enjoys access to the national electricity grid. Tunisia has a current power production.

Who produces electricity in Tunisia?

State power utility company STEG controls 92.1% of the country's installed power production capacity and produces 83.5% of the electricity. The remainder is imported from Algeria and Libya as well as produced by Tunisia's only independent power producer (IPP) Carthage Power Company (CPC), a 471-MW combined-cycle power plant.

Will got build a combined-cycle power plant in Tunisia in 2021?

In 2021, the GOT is expected to launch a tender for the construction of at least one of the two 470-550 MW combined-cycle power plants in Skhira (South Tunisia) as an IPP.

Does Tunisia have a power grid?

Tunisia's national grid is connected to those of Algeria and Libya which together helped supply about 12% of Tunisia's power consumption in the first half of 2023. Moreover, in August 2023, Tunisia's sub-sea connection project with Italy, called ELMED, was approved for \$337 million funding from the European Commission.

Who are the key players in the Tunisia power market?

The Tunisia power market is consolidated. Some of the key players in this market include Ansaldo Energia SpA, General Electric Company, Nur Energie Ltd, Seeraj Energy, and Societe Tunisienne de l'Electricite et du Gaz (STEG).

Where does Tunisia's power come from?

The remainder is imported from Algeria and Libya as well as produced by Tunisia's only independent power producer (IPP) Carthage Power Company (CPC), a 471-MW combined-cycle power plant. The CPC plant was officially handed over to STEG in May 2022 ending a 20-year power purchasing agreement between both companies.

Will private players drive the Tunisia power market?

Moreover, the government has plans to launch tenders for about 3.5 GW of renewable energy of about USD 3.5 billion by 2030, or approximately 350 MW per year, over the next ten years. Hence, the above points indicate that the increasing involvement of private players in the market is likely to drive the Tunisia power market over the forecast period.
