# Urban Complex Electric Energy Storage Project

## Overview

---

How long will urban electric work with utilities?

Urban Electric will work with utilities including Ameren, the Tennessee Valley Authority, Con Edison, and Duke Energy on one large-scale demonstration project, which will last for 16 weeks.

What is Urban Electric?

Urban Electric is a company that received a \$6 million ARPA-E Grant 12 years ago to design a storage solution for the grid. The goal was to create a solution that would be comparable in cost to pumped hydrogen, but not as geographically exclusive.

When will energy storage projects be regulated?

The storage industry anticipates this to be passed into law in 2022, and that it will apply to projects that achieved commercial operation after December 31, 2020, reducing the risks and uncertainty in energy storage project economics.

Could lift energy storage technology be a viable alternative to long-term energy storage?

Conclusion Lift Energy Storage Technology (LEST) could be a viable alternative to long-term energy storage in high-rise buildings. LEST could be designed to store energy for long-term time scales (a week) to generate a small but constant amount of energy for a long time.

What are the different types of electrochemical storage?

There are several types of electrochemical storage, each with a different chemistry and level of market maturity. These include lead acid, lithium-ion, flow, sodium-based, and nickel-based batteries.

What is the proposed arrangement for the lift energy storage system?

An example of the proposed arrangement is presented in Table 1. Energy is stored as potential energy by elevating storage containers with an existing lift in the building from the lower storage site to the upper storage site. Electricity is then generated by lowering the storage containers from the upper to the lower storage site.
