

SolarInvert Energy Solutions

What is a building solar system

Overview

The majority of BIPV products use one of two technologies: Crystalline Solar Cells (c-SI) or Thin-Film Solar Cells. C-SI technologies comprise wafers of single-cell crystalline silicon which generally operate at a higher efficiency than Thin-Film cells but are more expensive to produce. The applications of these two technologies can be categorized by five main types of BIPV products:

What is a building solar system

Five minute guide Rooftop Solar PV

What is a rooftop PV system? A solar photovoltaic (PV) system, mounted on the roof or integrated into the façade of a building, is an electrical installation that converts solar energy into ...
