Which is better a 540w or a 450w photovoltaic solar panel

Overview

What is the difference between 455w and 540w solar panels?

The 455w are quite a bit cheaper than the 540w per watt. I have a sunsynk 5kw and looking to install between 5000w - 6000w. I would like some opinions of what panels to choose. I know the voltage per watt is lower on the 540's and they are more efficient, but they are more expensive per watt. Please give me some perspective?

thanks!.

Is a fewer wattage solar panel a good idea?

The ONLY benefit is that there is 1 fewer panel. This should only be considered when space is extremely limited and when you are REQUIRED to hit a certain kW size that panels with lower wattage can't hit. Doubling the cost lowers your ROI and increases your time to pay off.

Are the 540w panels a good fit for the 5K sunsynk?

They're a nice fit. The 540W panels are closer to the 13A limit of the 5K Sunsynk's MPPT. Optimised and simpler configuration. Running at higher voltage and lower amps will always be more ideal.

How many Watts Does a solar panel produce per square foot?

Dividing the specified wattage by the square footage of the solar panel will give us just this result: The average solar panel output per area is 17.25 watts per square foot. Let's say that you have 500 square feet of roof available for solar panel installation.

What's the difference between 540w and 470W Jinko?

The 540W panels are closer to the 13A limit of the 5K Sunsynk's MPPT. Optimised and simpler configuration. thanks, Where is the 470w Jinko available from for R6.70?

I generally use inverter warehouse, they are down the road from me, and they have stock atm (for a change)

Which is better a 540w or a 450w photovoltaic solar panel

Are 540w/640w solar panels worth getting right now? : ...

Get it only if they fit your roof better by dimensions/ design. Otherwise, don't, they are just too heavy.
