

## SolarInvert Energy Solutions

# Which thin-film photovoltaic module manufacturer is best in El Salvador

## Overview

---

What are the different types of thin-film solar panels?

Before comparing the different types of thin-film solar panels against crystalline silicon solar panels (c-Si), it is important to remark that there are two main types, monocrystalline silicon (mono c-Si) and polycrystalline silicon (poly c-Si) solar panels.

What materials are used for thin-film solar technology?

The most commonly used ones for thin-film solar technology are cadmium telluride (CdTe), copper indium gallium selenide (CIGS), amorphous silicon (a-Si), and gallium arsenide (GaAs). The efficiency, weight, and other aspects may vary between materials, but the generation process is the same.

How are CIGS thin-film solar panels made?

Manufacturing for Copper Indium Gallium Selenide (CIGS) thin-film solar panels has improved throughout history. Currently, CIGS thin-film solar cells are manufactured by placing a molybdenum (Mo) electrode layer over the substrate through a sputtering process. The substrate is usually manufactured with polyimide or a metal foil.

What is building integrated photovoltaic (BIPV)?

One application starting to become widely popular worldwide is the Building-Integrated Photovoltaic (BIPV) highly dependent on thin-film solar technology. There are two main branches of this technology, solar shingles or solar roof tiles, and solar windows or solar glass.

## Which thin-film photovoltaic module manufacturer is best in El Salv
